

# The Highlanders

## FRC Team #4499

### The Highlanders Robotics Team

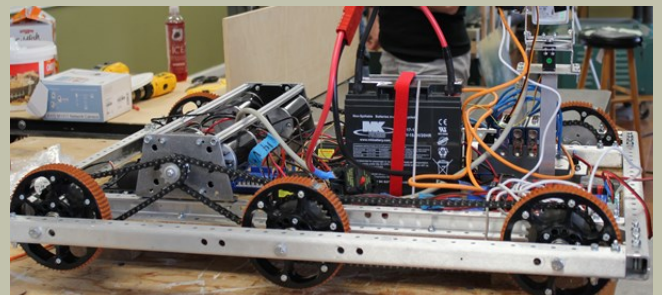

The Highlanders FRC Team 4499 consists of a group of great students that have strong work ethics, have pursuits in education, and share an excitement in the field of robotics. The Highlanders are considering entering a team in the FIRST Robotics season this year because of the experience the majority of the students have with FIRST Robotics, the integration of science, technology, engineering and mathematics. In FIRST Robotics, The Highlanders have learned more than just the principles of STEM. In addition, we learn about being a team, how to perform under stress, learn about business methodologies, communication and team involvement. Already we have learned concepts about running a business by creating a business plan and reaching out to companies so we can share our organization. These are important lifelong skills that we have started to learn to help us to succeed.

### Who are we?

We are a group of 19 students in 4 schools (Kinard Middle School, Fossil Ridge, Liberty Common and Rocky Mountain High school). We are you men and women with many different interests and experience. Many of us have been in the FIRST robotics programs for 7 years and some of us are just starting out. We are excited to start our first season with FRC and see what we can do to succeed and have fun!

We would like to come and talk to your business. So please feel free to contact us by email or visit us on our website at [www.highlandersfrc.com](http://www.highlandersfrc.com).

### What kind of support do we have?

We have been visiting many customers in Northern Colorado and have received support from them.

### What is FIRST?

FIRST, stands for 'For Inspiration and Recognition of Science and Technology', is a program that encourages students to peruse their interests in science, technology and business development. For more information visit [www.usfirst.org](http://www.usfirst.org).
